

TRAINING SAP ME / SAPMEINT

SAP Manufacturing Execution (SAP ME) including SAP ERP-Integration

The training will enable you to work in a production environment using SAP ME and to adjust complex SAP ME settings yourself.

The training will provide you with comprehensive basic knowledge of production control and management using SAP Manufacturing Execution (SAP ME).

Based on practical examples in a training system, you will be acquainted with typical use cases and functions of SAP Manufacturing Execution in discrete production. You will also learn how to integrate SAP ME into a SAP ERP system via standard interfaces (SAP MEINT).

Target group:

Production-related users (workers, employees in application support or manufacturing IT), who already use SAP ME / MEINT or are planning to do so and wish to learn more about the range of functions of the software.

Prerequisites:

- Basic knowledge of Manufacturing Execution Systems (MES)
- Basic knowledge of production processes

Contents:

- Core objectives and benefits of SAP ME
- Serialized and query-based production, including for order execution, work instructions, data acquisition, process locking, real-time production change, error management, qualifications, component traceability
- Activities and objects in SAP ME
- Maintenance of master and movement data in SAP ME
- Commissioning on a manual work center
- Configuration of User Interfaces (Production operator dashboards)
- Configuration of simple system settings (e.g. user-defined data)
- SAP ME standard reports
- SAP ERP-ME integration using SAPMEINT

Duration:

- 4 days, 8 hours each

Notes:

In this training, you will work with SAP ME 15.1.

The training can be held both on-site and in our training rooms. There will be an opportunity to address customer-specific questions.
